

"Asian Water Villa"

The concept

First and foremost we wish to capture the spirit of "Asian", to "inspire" therefore we aim is for our scheme to be considered an "original piece of thought".

Various style with mostly consists of the oriental taste, have influenced our thoughts and hence contributed to the birth of "Asian Water Villa".

The entire building will be cleverly laid out with natural form structures inspired by nature, particularly the sea.

The building includes:

1. Entrance area

Designed for free standing space with loose furniture and console table on the middle. Straight views to the ocean through the floating bed as a filter become a great experience when entering the building.

2. Floating Master Bedroom

Bed platform will be raised up for about 400 mm and the entire vertical border will be covered by laminated clear glass. Hence, water reflection effect will be captured and spreader out inside the building. A special bamboo fence design will cover around the bed with mosquito net hanging all over the edge. Looking up the space will give more spectacular experiences; the exposed bamboo roof structure combined with natural Balinese grass and incorporated with exposed bamboo bracing...the comfortable feel and harmonies taste is originally brought from Asia.

3. Private Lounge

Located on the left side of the master bedroom, the lounge designed with day bed near the opening with some loose furniture added. The magnificent views was arranged through the big opening window to capture unlimited of the blue ocean color.

4. Bathroom area

Located on the right side of the master bedroom. Filtered with half high of the vanity and wardrobe from the master bedroom. Free standing bathtub with terrazzo finishing as a consideration. Ocean view will be captured 180 degrees through the clear glass beside the tub.

5. Make-Up room

Located at the corner with loose table and chair, bordered with natural vertical bamboo finishes and exposed bamboo roof structure on the top.

6. Study area

Located at the corner with loose table and chair, bordered with natural vertical bamboo finishes and exposed bamboo roof structure on the top.

7. Outdoor deck

Using treated bamboo poles, the deck will give different experiences in term of appearances and the feel of the outsider area. The outdoor deck will be the best place for sun bathing, outdoor dining and relaxing. The staircase going down will drive us to touching the water and enjoy the activity.

The loose resembling of '*Asian Cup & Saucer Shell*' gives the inspiration of the overall building shape while the floor plan inspired by '*the bamboo poles shape*' at every course. In general forms are curved...like the mind few straight lines...and no sharp corners...easy on the eye...easy on the mind.

The materials

Floors

Outdoor deck will be using 80 mm dia treated bamboo poles. The layout will follow the shape of the deck edge and will be a break line at every course of intersection.

Internal flooring will be in T & G laminated bamboo flooring with clear coating and anti scratch applied. Bedroom flatform will be using 50 mm dia treated bamboo poles with clear finishes applied.

Walls

Curve wall will be designed using hardwood curve member as a frame. External cladding and internal cladding will use vertical bamboo slats. The color appearance will be the same as the internal flooring.

Roofing

Bamboo is the prime material for the roofing structure. Curve bamboo to create the shape of the roof will be supported by bamboo bracing and tightened by the bamboo batten as part of the Balinese grass roofing. The bamboo structure allow to bend to give the possibility to make a curve form.
